## 検査IV

## 英語解答例

IV	Q1	<p>Figure1</p> <p>(例) High school students who value their hobbies and free time over work increased over the past 10 years from 2012 to 2022. The percentage of high school students in Japan feeling this way is the highest and increased drastically, compared to students in America, China and Korea.</p>
		<p>Figure2</p> <p>(例) The percentage of high school students who think that they should be patient, and keep working even though they can't get their ideal job has increased during the past 10 years from 2012 to 2022 except for Japan. Around 30 % of Japanese students think so, which is the lowest among the four countries in the survey in 2022.</p>
	Q2	<p>(例) I think that the trends show that high school students value the balance between work and their private time. They would like to focus on what they really want to do, instead of just working hard. While we have responsibilities and obligations as a member of society, I overall agree with them because I believe that hobbies and free time enhance our imagination and give us a chance to see things from different perspectives. I hope this helps us adapt to new and difficult situations and ensure our own well-being.</p>
